Evac Train – Integrating Excellence

For more than 40 years, Evac solutions have been known for outstanding reliability, efficiency and low maintenance. As the world’s leading provider of completely integrated sanitary systems for trains, we have been generating state-of-the-art components with “built-in” field experience of about 80,000 vacuum systems installed worldwide— and counting.

With extensive expertise and rigid quality assurance, we develop and integrate high-class components into seamless systems that, just like railways, are much more than the sum of their parts—individually tailored for the demands and conditions of vastly different markets in many countries. Introducing a maximum level of performance and stability into any system while using minimum resources and space is our day-to-day business. This is why integrating Evac is integrating excellence.
Evac Compact
One unit. All components. Full flexibility.

System Design

Saving space as well as resources, this microprocessor-controlled, all-in-one unit features a local vacuum system, removing the need for a vacuum-proof waste water tank. It is available with both sliding gate valve and pinch valve. Use depends on customer preferences and specifications. The customer has a choice between sit-down, squatting pan and urinal styles.

Super efficient at just 0.5 l water per flush and engineered to ensure optimum performance using small tank volumes, the Evac Compact is an excellent and economical standalone solution. Its integrated fault detection and trouble shooting as well as easy installation and maintenance make it a worry-free system: The entire unit can be replaced within 10-15 minutes.

How it works

» After flush activation a vacuum is created in intermediate tank
» The bowl is rinsed
» Bowl contents are discharged into intermediate tank
» Pressure is increased to transport contents of intermediate tank to waste water tank

General Technical Data

- Approx. 18 kg
- Without seat: 540 x 365 x 373 mm
- 24 V DC (+/- 30 %)
- EN 45545
- 2.2 W (standby) – 12 W (operational)
- Approx. 0.5 liter per flush
- 0.2 W (standby) – 12 W (operational)

Consumptions

- Approx. 20 liter expanded air per flush
- Evac sliding gate valve and Evac pinch valve can be used.

Evac Compact

Product Overview

The vital ingredient for truly exceptional results

- Every single product designed to meet highest technical expectations
- Continuous innovations and updates guarantee future-proof investments
- All products extensively tested and tailored to our clients' specifications

As the partner of choice for demanding clients all over the globe, Evac is sure to have the right answer to your needs – whenever you are from small repairs to complex re-configurations, from customized spare-part concepts to building your own service depots. Do you want to learn more? Just give us a call at +49 4103 9168 0

Integrating Services

- Fast and straight-forward on-site assistance – worldwide
- Optimum availability of all products and parts at all times
- Tailored service concepts with guaranteed availability levels
- Sophisticated and highly responsive logistics
- Technical support during installation and commissioning
- Full after-sales service including maintenance, workshops and training sessions as well as advice on cost-efficient modernization and optimization of existing systems
